SUMMARY

I am a university graduate with a bachelor’s degree in computer science. I have experience in volunteer work. I volunteered in three organizations in which I took care of and helped orphaned children and blood donation campaigns, in addition to contributing to afforestation and forest cleaning operations
I gained skills in dealing with different people, young and old. I listen better to them and help solve problems. I feel empathy and compassion for them. I loved this work and I am proud of it.
